- 2 - Michigan Users: Beginning in the 2018 school year, the Ed-Fi School ID will extract as the School Number assigned to any School Codes reported in Data Integration. Previously, this would report the School Code itself. This requires no action on the part of the user. The School ID will just report the 5-digit code assigned by the state. For the remainder of the 2017 School Year, the system will continue to report the School Code if it is numeric to allow for consistency of the code reporting within the school year, but any School Code currently containing alphabetic characters instead of numbers will automatically report as the 5-digit School Number in the 2017 school year as well.
- 3 - Michigan Users: In the Ed-Fi Configuration option in Data Integration, the "Set to Default" link now works correctly in all supported browsers. When setting up any custom configuration, this link can be used to pre-fill the standard Skyward Namespace value of <http://midatahub.org/namespaces/skyward> when completing the Data Gathering Settings area. This new option has been added so that entities that are using a blanket waiver (mainly for DAEP, to go over the normal 420 minute/day limit) may be able to override the Total Minutes per Day value set in the Calendar Master. For example, when all days have had an Event added with the Other Waiver Code, but the entity needs to report a day using a different Waiver Code (like Professional Development), users may now add a new Event to the day, check the box to use the Override Total Minutes field and enter a value of 420. The Event using the Other Waiver Code may then be deleted for that day, and the day will now use the 420 minute total instead.
